

Bird's eye view of Dannebrouge on the right. Note the decimation of the trees that have been cut to run the mining equipment.

Photograph of the main shaft of the Dannebrouge in the 1950's, showing outbuildings and the new "A" frame.

Early miners in Dannebrouge shaft. Note the candles that denote presence of oxygen

Looking north toward the restored support beams under the ore hoppers on the mine.

BRIEF HISTORY OF THE DANNEBROUGE

The Dannebrouge Mine was developed in the mid 1850's after gold was discovered in Browns Valley. The mine is a hard-rock quartz mine and is one of seven that were located in Browns Valley. Multiple owners labored for one hundred years and removed around \$10 million of gold from the mine. It is 1800 feet deep and has been flooded since the mid 1950's when the mine was permanently closed.

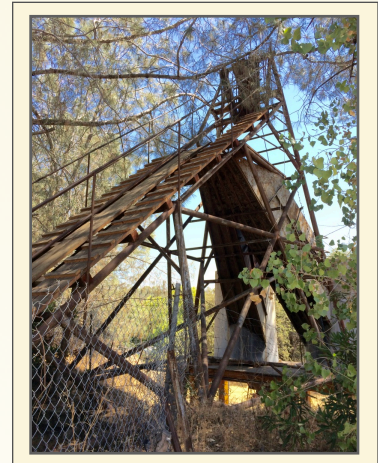

Restoration is ongoing to ensure that the mine retains its historical relevance for the community.

Yuba County Historic Resources Commission

The Yuba County Historic Resources Commission was established by the Yuba County Board of Supervisors in 2015 to help uncover and preserve the region's rich history.

It shall be the purpose of the Historic Resources Commission to advise the Board of Supervisors on historic matters within the County of Yuba. The Commission shall endeavor to discover and identify persons, events, and places of historical importance within the County; to make recommendations relating to the preservation of historic sites and structures; to coordinate with historic groups and museums within the County to encourage their development; and to cooperate with and obtain assistance from related agencies.

Contact the Commission on Facebook @ *Yuba County Historic Resources Commission*.
